Equipment Issues	None reported
Rapid Response	None reported
Code Blue	None reported
Maternal Child Health Issues	3/8/2012 (3-11) 4 West has a deaf/mute patient in labor. A sign language interpreter was at the bedside for assessment, explanation of treatment and plan of care, and consents. The patient had difficulty understanding the video monitor due to the time delay. During discussion with the ADN, the patient required an epidural. She requested an interpreter during this procedure and it was provided. The patient agreed to use the video monitor going forward. The ADN spoke with the patient and family, explained our policy, the use of the video monitor and specific instances when the live interpreter will be called in. The ADN had further discussion with the ASL representative and this was communicated to

	Rita Smith. The interpreter was at the bedside from 9pm to 11:30pm. The patient's mother and husband are at the bedside. 3/8/2012 (11-7) 4 East Infant security system not functioning. Security posted on the 4 th floor.
Critical Care Issues	3/8/2012 (3-11) Two patients enroute for possible open heart in the morning. One patient will be admitted to 6 East and one will be admitted to CCU.
Medical-Surgical Issues	3/8/2012 (3-11) MR#0001234567—80 year old female to OR for a repair of a fracture of the hip s/p fall at home. Initial CT of the head was negative. Post-operatively, the patient was difficult to arouse. CT of the head shows a bleed and subarachnoid hemorrhage. Patient transferred from PACU to ICU. Chart review completed by Risk Management.
